=====

[APOCRINE CARCINOMA](#) – *Very RARE form of Male Breast Cancer*

“Apocrine carcinoma of the **male breast** is an **exceptional malignant tumor**. It does not have a particular clinical or radiological appearance, but it's microscopically characterized by the presence of granular cells and foamy cells representing over 90% of tumor cells.”

=====

When I was diagnosed with cancer, my family was devastated.

First the medical people had no idea what kind of cancer it was but were **leaning towards a type called Apocrine**. I found out **there were exactly 38 people in the world** that had this **type of cancer** before I did and **not one of these people had survived**.

Next thing I found out was the medical people had **no idea how to treat this type of cancer**. A decision was made to treat me **as though I had male breast cancer** and they told me they had **no idea how this was going to turn out**, all they could do was to cross their fingers and **hope for the best**.

A Baptist minister from Florida (who I did not know) who heard about me from his daughter who was a friend of my daughter, contacted me and **told me about PolyMVA**.

He told me **that he and 3 other men from his parish** all had been diagnosed with **different types of terminal cancers** and **each one was told to get their affairs in order and sent home to die.**

He told me that **each one of them began to take PolyMVA** and now **3 of the 4 are now in remission** and the **4th one lived about four years** before his cancer finally claimed his life. I **made a decision right there** that I would use this product for my health. **I told a few others about PolyMVA** while I was undergoing my radiation treatments.

**One of these men also started using the product. Today He and I are both enjoying life.** I am convinced this product, PolyMVA, is the reason I am writing the letter to you today. Thank You PolyMVA.

Sincerely,

Edward Freed

#### **5-18-2010**

I had the remainder of the tumor removed. My **PET Scan** showed **no new cancer** present anywhere in my body.

I am convinced that my body being cancer free is **all due to the poly-mva**. I say this because the **other people I met with cancer** when I was undergoing my radiation **have died** from their cancer and **here I am cancer free.**

#### **7-19-2010**

PET scan **no sign of cancer**. I am now **cancer free**. Thank you poly!

Ed Freed

**5-19-2017**

Ed is **still doing well** and taking Poly.
