In early 2008, I went to the doctor and they had seen a lesion on my scalp. They had taken a biopsy of the lesion and had **diagnosed it to be a cutaneous T cell Lymphoma**. I went to Moffett Cancer Center and they had **reassessed the outcome to be Non-Hodgkin's Lymphoma Stage 1A**.

I was recommended to have **radiation on my scalp**. Upon reviewing the information about radiation, **I had decided to go a different route**.

I found PMVA.

I have forgotten how I was introduced to PMVA. **I have since been taking PMVA since August of 2008**. Along with PMVA, I have incorporated supplements in my regimen consisting of Vit D3, Bone Restore (super calcium) Ubi Quinol, Super Mega 3 (olive oil extract, a daily multi vitamin, Super Booster (advanced (k2 complex), Reversatrol, Hawthorne berries, etc.

I am very adamant in my holistic and natural approach. **I have found the information given to me by the information packet, web site and the AMARC Staff has been helpful**. I often visit

the www.PolyMVA.com website to **listen to the recordings of the doctors, like Dr. Forsythe, very helpful.**

Overall, I feel that **PMVA has helped with my overall Quality of Life, Energy, Increase in my appetite and cancer support.** I notice that it does help my energy and keeps me active in my life. I often share the information about PMVA and what it has done for me.

The proof is in the pudding.

You can only tell someone about PMVA and the ball is in their court. Not all of them pursue PMVA, but **those that I have recommended to use PMVA have found it to be helpful in their quality of life.**

I am a true believer and advocate of PMVA and I continue to use it and share with others.
