

Prostate Cancer

Poly-MVA Cancer Patient Testimonials

Brian L. Anderson

Date: Summer 2005

Diagnosis: Prostate Cancer

E-Mail: profsprague@hotmail.com

In the mid 1990's my PSA count began to climb above a 3.0 so Dr. Kemire, my regular Kaiser Permanente Doctor did a digital exam of my prostate. He explained that it felt a bit firm and if my next PSA count were to get higher, I should consider having a biopsy to check for any signs of cancer.

Over the following decade **my PSA count would increase to as high as 10.5 and then decrease to as low as 6.0.** In 2005 I met with Dr, Stewart, a Urologist at Kaiser and we scheduled a biopsy for me. In our meeting after the procedure I was expecting him to say the results were benign and I would leave his office a relieved man. But no, **he said, "you have prostate cancer" and I was in a state of absolute shock!**

After he calmly explained my three medical options, i.e. radiation treatments, chemotherapy or surgical removal of the prostate, I said, **"I'd like to take time to consider some other options."** Dr. Stewart also informed me that **on the Gleason scale my count was a 7 out of a possible 10** which was not good. The best news he shared was my cancer was not aggressive.

After returning home I telephoned my friend, Margaret Walt an RN with Kaiser, whom I knew had attended a cancer convention for alternative therapies in the Los Angeles area. I asked her if she had any information about a product to control prostate cancer. **She told me about Poly-MVA and gave me a 800 number to call.** I got in touch with Gary Matson at AMARC

Enterprises and asked him **if there were some men currently using Poly-MVA that I could call** to hear about their use of the liquid dietary supplement for prostate cancer.

He gave me the names and telephone numbers of several men whom I called. **After hearing their testimonies, I knew it was important that I order some Poly-MVA and get started using it on a daily basis. So in 2007** I enrolled in the "Quality of Life" program for a year to monitor my usage of the product and provide useful data for the future.

In 2009, because my PSA was at 12.7, my new Urologist, Dr. Chabra, wanted me to have a second biopsy. That made sense to me so I went ahead and had it done. The results were unbelievable to both of us. **My Gleason count was a 5, versus the 7 only two years earlier.** The Doctor had the Laboratory check my results twice because he could not believe the lower number. I told him it was due to "the power of prayer, a positive attitude, proper diet and Poly-MVA. I showed him a 8 ounce bottle of the supplement for his information.

Over the past 5 years since 2007 I have taken Poly-MVA orally each day (2 teaspoons) and no other products for my prostate cancer.

My most recent written report (05/23/11) from Dr. Chabra stated, "**PSA is essentially unchanged for the past 3 years at 12.7.** Please repeat in another 6 months."

I have been so impressed with the results of using Poly-MVA that each year I volunteer for 3 days over the Labor Day Weekend at the Annual Cancer Control Convention in Universal City, CA. **The conversations I and other "Survivors" have with interested men and women at the Poly-MVA Booth and the sharing of our testimonies at a General Session is a very gratifying personal experience** and an encouraging one to our listeners.

I plan on using Poly-MVA for the rest of my life and trust I'll have many more years to share its benefits!

Sincerely Yours,

Brian Anderson
