### 2 Updates

9-23-2013 – 11-26-2018

I began using Poly MVA on 8/3/03 on the advised of a friend.

Surgery was successful - no chemo or radiation needed. But I knew that I needed to correct some nutritional issues. Eventually I **dropped down to 1 tsp of PolyMVA a day.**

However, in **February 05.** My **CEA blood work came back elevated,** for **7 months I saw my CEA levels steadily raise.**

In late **August 05,** I went back to a **full dose 8 tsp a day for 3 months.** By **November 05** my **CEA was normal.**

As a result, I **backed off** my PolyMVA usage again. **And again by early 06** my **CEA was up slightly.** I went back to a **full regime until May 06** when **CEA levels were normal again.**

**Since Sept. 06** I've taking **2 tsp 2 times daily** of Poly MVA - my **CEA levels have remained normal.**

Mark

**9-23-2013**

Mark is on a maintenance which is keeping his CEA levels in check.

**11-26-2018**

Still using Poly MVA on a daily basis.
